

## Mosaic-Hands

### Skin Care Product Information

Natural skin care products made from the oils, scents, and parts of plants and clays . Plants have their natural ways to protect themselves like our immune system protecting us.. Thus, our products are infused with ingredients that capture the protective and nourishing properties of natural living materials.

## Natural Plant Oils

Moisturize, nourish, sooth and regenerate our skins. Many plant oils are rich in Vit.A, B, C and E and essential fatty acids.

## Essential Oils

Highly concentrated essences extracted from plants. They are used in Aromatherapy treatments as a curative and preventative aid to enhance our well being and as a natural preservative to protect the products.

## Clays

The high mineral content of clay rejuvenate the skin. Clays can exfoliate dead skin cells, improve circulation, and absorb oils and toxins from the skin.

They also provide a natural colorant to skin care products.

- \* Do not store products in high temperature area or under light.
- \* Do not leave container open and exposed to air for prolong period of time.
- \* Do not add water or other ingredients to products.
- \* Use up products within 6 months after opening
- \* Product shelf life: 12 months

## Hand Made Old Fashion Soap

Our soap is made with Coconut, Palm and Olive oils. Before the First World War, soaps were made by combining oils and lye. This is how soaps were made since ancient times and how soaps should be made. After early 1900's, when chemical surfactants and bubbling agents were invented, traditional techniques of soap making was lost. Chemical soaps are inexpensive and fast to make. Traditional soaps are labor intensive, but the benefits are well worth the efforts.

We want to bring the ancient art of soap making back, as the final product is good for the skin and the environment. Natural soap is "Bacterio-static" and not "Bacterio-cidal".

## Basic Ingredients for the Soap

The base for the soap consists of Coconut oil, Palm oil and Olive oil. After chemically combining the oils and lye, soap with naturally occurring vegetable glycerin is formed.

The soap cleans and the vegetable glycerin helps to restore skin's natural moisture by drawing the moisture from the air.

## Natural Additives

The cosmetic ingredients added to the soap are for colour and scents and additional benefits, such as aromatherapy, removing toxins, additional nutrients, and exfoliation.

### Colour:

We only use natural plant colourants:

Indigo for blue, Ratanjot for purple

Fustic for brown, red clay for red

Annatto seeds for yellow, Charcoal for black

### Scent;

We use a wide range of pure essential oils collected from all over the world.

## Preservation of Ancient Wisdom
